

The Wear Tool

The Wear Tool is a vehicle self-inspection tool that can be used to determine areas of excess wear. Ideally, your vehicle will have no excess wear but we suggest using The Wear Tool to avoid surprises that could come up during your official inspection.

Acceptable sizes of various types of normal wear are noted on the tool, along with measuring guidelines to help with a self-inspection. If you identify necessary repairs, we recommend ensuring all repairs are completed by a certified mechanic or repair technician before your turn-in date.

Be aware that some repairs may be covered under warranty or insurance.
